

Turn on we-inspire CT

Turn on the computer by simply pressing the on/off button.

Also turn on the keyboard to enter password.

Use the remote control of the projectors to turn them on/off. Please do NOT use the on/off button on the projectors directly as this changes the position of the projector(s). As a result, a recalibrations may be necessary!

Take the Anoto Digital Pens and turn them on. Now they can be used in the same way as your mouse!

The we-inspire core as well as the we-inspire write app will start automatically (or will already be running). In order to use the other we-inspire apps, simply double click on the following icons:

How to use Anoto Digital Pen

WALL

In order to have the Anoto Digital Pen working in a proper way on the wall, it is recommended to use it within an angle of 50 to 85 degrees.

PAPER

In order to have the Anoto Digital Pen working in a proper way on paper, it is recommended to use it within an angle of 40 to -20 degrees.

Caution

WALL

PAPER

While using the Anoto Digital Pen on paper, keep distance to the edges as the camera - which is inside the pen - is then out of reach and can no longer detect movement.

Bluetooth pairing

The pens are connected to the PC via a Bluetooth connection.

To pair the pens find the little Bluetooth icon in the taskbar. click and select "Add Bluetooth device". Alternatively, you can also go to "Devices and printers" and click the "Add a device" button.

Windows will now start searching for various devices it can connect to. The Anoto Digital Pens will show up as "ADP-601" or just as "Input-device". If the pen is not showing up try turning it off and on again and restart searching for new devices.

When a pen is selected it will prompt for a pairing code. Enter 0000 (4 times zero) and click next. Windows will now install the pen (which can take some time). After the pen was successfully paired and connected, the pen LED will turn green.

Calibrating

The we-inspire wall needs to be calibrated in order to be used.

Click on "calibrate" and choose the screen you want to calibrate.

Click in the very center with the Anoto Digital Pen.

Start with the one cross marked by the red circle and which is number as "1". Repeat these steps for number two, three and four.

Still not working?
